

Deliver engaging content and valuable services to your patrons with a library-branded mobile app that delights and promotes discovery, every step of their journey.

Modern, Functional Design

BiblioApps takes the best your library has to offer—your collections, events, locations, and resources—and brings these together with industry-leading mobile design principles to create a beautiful and engaging user experience.

Experiences That Enable Discovery

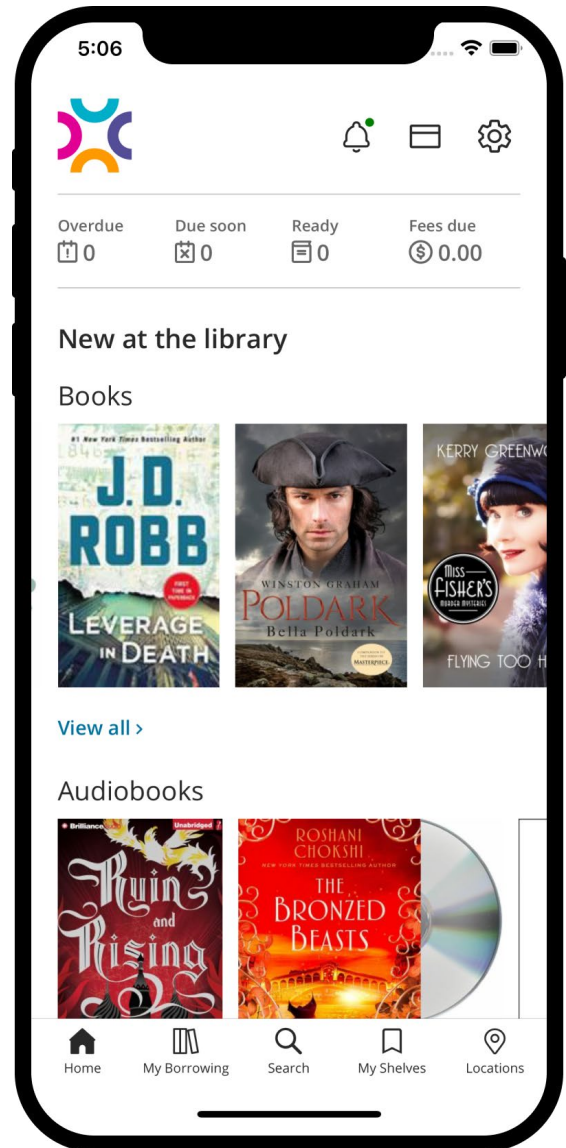

Bring the joy of browsing the shelves to your mobile app. A content-forward Home screen highlights new titles, staff lists, and events, with recommendations and titles 'for later' bringing the thrill of discovery to every swipe.

Searching That Inspires and That Patrons Deserve

Consistently deliver relevant and accurate search results with BiblioApps' best-in-class search relevancy. Sophisticated facets and a FRBRised grouped results display makes it easier for users to find what they're looking for.

Self-Checkout Capabilities

Provide patrons a fast and convenient way to check out library resources using their own devices. From discovering new titles, placing holds, and checking out collections on their own, patrons have a safe contactless way to borrow when visiting your locations.

An App Everyone Can Use and Love

ADA compliance in native apps is critical, and key to the BiblioApps experience. Our commitment to accessibility—to screen reader capabilities, contrast and color compliance, and dynamic type—is unmatched by other public library mobile app providers.

Scan to Search for Books and Movies

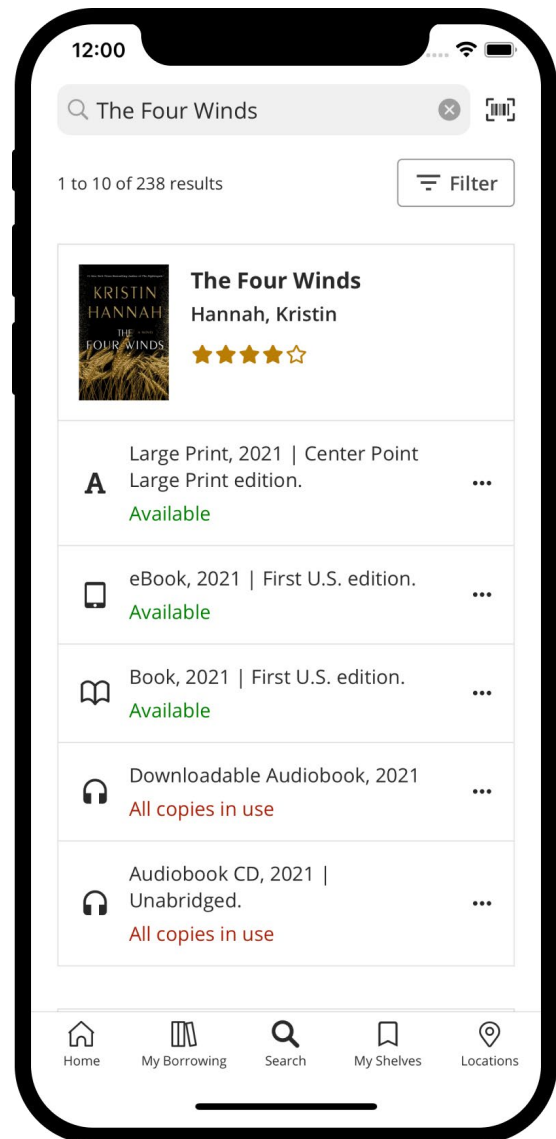

Patrons can quickly locate and save books and movies in your collections by scanning an item's barcode from their device.

Easily Configure Location Information to Make Visiting Easy

Keep patrons up to date with clear and helpful screens for your locations. Bundled admin tools make it easy for staff to configure opening hours, closures, and more!

Language Localization

Communicate more effectively with your patrons by speaking in their preferred language. BiblioApps is available in 10 different languages, including Spanish, Chinese, and Filipino.

Leverage mobile technologies to drive patrons to the library with a beautiful, functional, and accessible mobile app!
